KEY RESULTS

1 h → 15 min
per client deliverable, across many automated deliverables (Way2Call)

−70%
processing time on recurring reporting and quality checks (Orange CI)

+73%
three-month retention after customer segmentation and campaign targeting (Orange CI)

LANGUAGES

French: fluent

English: intermediate

SOFT SKILLS

- Proactive ideas
- Active listening
- Initiative
- Rigour

Mame Abdoulaye Diouf.

Data scientist by training · Data analyst · Data engineer · Business analyst · Performance management

PROFILE

A data scientist by training (econometrics and statistics), I build reliable data pipelines, automate reporting end to end and turn analyses into decisions. From gathering business needs to dashboards in production, I coordinate multi-stakeholder data projects and train teams to use decision-support tools, so that data genuinely drives performance management.

PROFESSIONAL EXPERIENCE

Operational Data Miner · Way2Call Group

Since March 2026

- Coordinate lead integration between the group, partner brokers' data teams and service providers, from set-up to go-live of every campaign.
- Design multi-channel ingestion (email attachments, SFTP, CRM exports) and orchestrate scheduled jobs with blocking checks and execution logs.
- Automate preprocessing and refresh of Excel and Power Query reports: one hour of manual work cut to 15 minutes per deliverable, across many client deliverables.
- Build the QS & Prod flash report for an energy campaign: output, quality of service per call queue, sales and go-lives, refreshed during the day.
- Build the "Lead & reachability analysis" dashboard (Shiny, Power BI): full funnel, reachability by attempt, sales by hour and refusal reasons.
- Mine CRM data to target high-potential segments; document processes and provide data support to operational teams.

Data Analyst · Orange Côte d'Ivoire

Nov 2023 – Feb 2026

Performance and project management (2023-2024), then channel and Broadband sales management (2025-2026)

- Developed a model predicting underperformance of door-to-door sales partners (logistic regression benchmarked against Random Forest and XGBoost) and used it to redesign sales territories.
- Automated ETL in R and SQL and delivered reliable analytical tables: −70% processing time on reporting and quality checks.
- Automated daily segmentation of the prepaid fibre base and delivered targeting files for reminder and retention campaigns.
- Analysed the link between complaints and churn, segmented customers and steered campaigns: +73% three-month retention.
- Designed and maintained Power BI management dashboards (4G and fibre sales, top-ups, backlog, complaints) by channel, partner and region.
- Managed sales performance of the franchise network against targets and advised managers on recovery actions.
- Analysed channel sales performance, forecast partner sales and presented recommendations at monthly reviews and steering committees.
- Contributed to the Data Mesh (data products, governance) and Mawthawer (regional KPI data marts) company projects.

TECHNICAL SKILLS

LANGUAGES
R, Python, SQL

DATA
Oracle, PostgreSQL, Starburst, Talend, ETL, Data Mesh

BI
Power BI, Power Query, Shiny, advanced Excel

MODELLING
Logistic regression, Random Forest, XGBoost, SMOTE, segmentation, time series

TOOLS
QGIS, SPSS, Git, GitHub Actions, APIs, scheduled jobs

BUSINESS SKILLS

- ▸ Sales management and target tracking
- ▸ Channel and partner performance
- ▸ Contact centres: output, QS, reachability
- ▸ Telecoms: fibre, 4G, churn
- ▸ Steering committees and recommendations
- ▸ Multi-stakeholder project management

EDUCATION

2022 – 2023
MSc (Master 2) in Econometrics and Statistics

2021 – 2022
Master 1 in Econometrics and Statistics

2018 – 2021
BSc in Economics and Statistics

International University of Applied Sciences and Technology (Abidjan)

CERTIFICATIONS

Coursera · Data Analysis and Visualization with Power BI (in progress)

Coursera · Fundamentals of Data Science

Mame Abdoulaye Diouf.

EXPERIENCE (CONTINUED)

Data Manager · Société Générale Côte d'Ivoire

Sep – Nov 2023

- Defined data requirements for the Testing Factory unit's projects with technical and functional teams.
- Prepared, cleaned and delivered consistent datasets for test campaigns.

EXPERTISE

Data engineering
Multi-channel ingestion, ETL pipelines, orchestration of scheduled jobs, data quality checks, data marts, Data Mesh.

Reporting automation
End-to-end daily chains: extraction, preprocessing, consolidation, template refresh, distribution.

Data science
Predictive models, segmentation, churn, forecasting, data mining, model validation and interpretation.

Performance management
Real-time dashboards, target tracking by channel, partner and franchise, steering committees.

Business analysis
Requirements gathering, KPI design, gap analysis, recommendations, project coordination.

Enablement
Training teams on decision-support tools, user guides, documentation and handover.

SELECTED ACHIEVEMENTS

Predictive model and territory redesign
Four explanatory variables, SMOTE rebalancing, cross-validation. The most competitive areas went to experienced partners; the others were redirected and trained through the fibre academy at the senior manager's request.

Hands-off reporting
Scheduled extraction, consolidation, checking and distribution chains: figures are ready before teams arrive, and they focus on validation.

Franchise performance management · Orange CI
Tracking each franchise's sales against targets, spotting gaps and advising managers on turning lagging outlets around.

Data project coordination
Data Mesh and Mawthawer at Orange CI, broker integration at Way2Call: scoping, aligning business and technical teams, go-live.

Decision-support training
Onboarding sessions for every new dashboard, user guides and KPI documentation, support until teams are self-sufficient.
